

# StatVentures Address Geolocation Challenge Phase 2 Winners

December 2025

**Census Open Innovation Labs** is pleased to announce the four Phase 2 winners of the **StatVentures Address Geolocation Challenge**.

This competition invites participants to propose new approaches to produce more complete, accurate, timely, and granular data on the locations of residential units in the United States, especially in rural and remote areas.

During Phase 2, teams submitted implementation roadmaps that were evaluated by expert judges on clarity, innovation, expertise, and potential for impact. The selected winning teams represent a diverse set of ideas including satellite imagery, Synthetic Aperture Radar (SAR), artificial intelligence (AI) and machine learning (ML), computer vision, high-resolution stratospheric imagery, and other external data sources such as cell phone towers and broadband, radio frequency, thermal imaging, and e-commerce data..

These four winners will receive \$50,000 each (\$200,000 in prizes split evenly across the winners).

We congratulate the Phase 2 winners and thank them for their innovative work and dedication to transforming our nation's address geolocation data. We also thank everyone who applied for their passion, diligence, and ingenuity; and the many judges who volunteered their expertise to help select the winners.

**The Phase 2 winners of the StatVentures Address Geolocation Challenge are:**

**Deloitte.**

**SAIC**
